

Deep Rana

Chicago, IL | 224 817 7427 | rana10deep@gmail.com | [LinkedIn](#)

Recent Computer Science and Data Science graduate who has built production Power BI dashboards and ETL pipelines supporting live business systems. Skilled in SQL, Python, and Power BI (DAX), with experience turning large scale datasets into actionable insights for engineering, product, and operations teams. Seeking an entry level analyst role where I can make a meaningful impact.

EDUCATION

B.S. Computer Science, Minor: Data Science

September 2021 to June 2025

DePaul University, Chicago, IL | GPA: 3.5

Relevant Coursework: Data Analysis & Regression, Data Structures & Algorithms, Software Testing, Advanced Data Analysis

TECHNICAL SKILLS

Programming & Querying: Python, SQL, R, Java

Data Analysis: Pandas, NumPy, Regression Analysis, Statistical Analysis, Data Cleaning, Data Transformation

Visualization & BI: Power BI (DAX, Power Query), Excel, Matplotlib

Analytics & Reporting: KPI Development, Dashboard Design, Business Metrics, Time Series Analysis, Data Storytelling

Other: PostgreSQL, SAS, Git, Django, Jira, Selenium, Agile Methodologies, MS Office

EXPERIENCE

Data Analytics Intern, Swing Phi LLC

Nov 2024 to Jan 2025

Aurora, IL (Remote)

- Built 3 Power BI dashboards surfacing system usage and performance metrics for a 6 person engineering team, cutting manual data pulls by roughly 5 hours per week.
- Designed and maintained ETL workflows processing real time stock market data and news feeds from 4+ sources, sustaining about 99% data accuracy for downstream analytics and alerting systems.
- Partnered with engineering and product stakeholders across 2 sprint cycles to clarify data requirements, shortening insight delivery turnaround by an estimated 20%.
- Developed automated pipelines generating trading indicators and alerts for a live screening platform used by an estimated 500+ retail investors.

IT & QA Technician, Sonova Group USA

June 2022 to Aug 2022

Aurora, IL

- Executed structured diagnostics and QA testing on approximately 50+ electronic devices per day, logging results that identified recurring failure patterns and informed process improvement decisions.
- Maintained accurate operational records and compliance documentation across 100% of testing cycles, preserving data integrity for internal audits.
- Helped automate 3+ repetitive workflows, reducing manual intervention in device processing by an estimated 15%.
- Partnered with an engineer to deploy a Universal Robots UR10E robotic arm, improving packaging throughput by roughly 20% and reducing line error rates.

PROJECTS

E Commerce Sales Analysis | Python, SQL, Power BI

August 2026

- Analyzed 100,000+ order records from a Brazilian e commerce platform to identify revenue trends, high value customer segments, and delivery inefficiencies across 27 states, delivering insights that informed regional strategy.
- Designed a PostgreSQL database with 6 normalized tables and wrote complex SQL queries (joins, window functions) to answer business questions on seasonality, customer lifetime value, and geographic sales concentration.
- Built an interactive Power BI dashboard with 12+ DAX measures tracking revenue growth, product category performance, and delivery time impact on customer satisfaction, enabling drill down by region, payment type, and time period.

Superstore Sales & Returns Analysis | Power BI, DAX

March 2026

- Designed an executive level Power BI dashboard analyzing sales performance, return rates, and profitability across product categories, regions, and sales managers to support strategic self service analytics.
- Authored 10+ custom DAX measures including return rate %, returned revenue impact, gross margin, and YoY growth, enabling evaluation of performance across multiple business dimensions.
- Built cross filtering slicers, drill down hierarchies, and KPI cards to surface high return product categories and key profit drivers at a glance.

UniVerse: Student Rental & Marketplace Platform | Python, Django, PostgreSQL

Jan 2025 to Mar 2025

- Designed relational data models in PostgreSQL to support listings, rentals, and roommate matching, and wrote SQL queries to power search and recommendation features.
- Collaborated with a team to translate functional requirements into backend logic and validated application functionality using synthetic and test datasets to simulate real world usage.
